SAUDI BOARD RESIDENCY TRAINING PROGRAM
Final Written Examination of Periodontics (SB-Perio) 2017

Objectives:

- Determine the quantity and quality of specialty knowledge base ranked as competent, so that the individual can be used as a referral source for the specialty.
- Using theoretical data, determine the candidate’s ability to think logically, to solve problems, to apply basic medical science to clinical problems, and to make judgments with valid comparisons.
- Screen candidates for the purposes of being allowed to take the final clinical examination.

Eligibility:

- Successful completion of the required period of residency training.
- Obtaining a training completion certificate (or equivalent) issued by the local supervisory committee based on a satisfactory Final In-Training Evaluation Report (FITER) and any other related requirements assigned by any mentioned scientific boards (e.g. research, publication, logbook, etc.). FITER example outlined in Appendix 6 in the exam rules and regulations document on SCFHS website.
- Any candidate missed a maximum of three (3) months of training of the whole residency program are allowed to sit for the exam (written and clinical), and his/her results will be suspended till that missing period is done.
- Registering for the examination at least one month before the exam date.

Rules:

- The Saudi Board Part II specialty written examination will be held once each year on a date published on the SCFHS website.
- Examination dates should be provided by the Specialty Examination Committee (SEC) in accordance with the fixed annual schedule submitted by the examination department.
- There shall be no reset examination.
• A candidate would remain eligible for Saudi Board Part II written examination for a period not longer than three years provided they could prove they had been clinically active.

• If the candidate did not pass within the three years, an exceptional attempt may be granted upon the approval of the scientific council, provided evidence of continuing clinical practice is presented.

• A candidate who failed to pass Saudi Board Part II written examination including the exceptional attempt has to repeat the final year of training, after which he/she is allowed to sit the Part II written examination twice after approval by the scientific council.

• After exhausting all the above attempts (maximum 6 attempts) the candidate will not be permitted to sit the Saudi Board Part II written examination.

Examination Format:

• A Saudi Board Part II specialty written examination shall consist of two papers each with 100 -120 Single Best Answer (SBA) MCQs). Ten unscored items can be added for pretesting purposes.

• The examination shall contain mostly type K2 questions (interpretation, analysis, reasoning and decision making) and type K1 questions (recall and comprehension).

• Clinical presentation questions include history, clinical finding and patient approach. Diagnosis and investigation questions; includes the possible diagnosis and diagnostic methodologies (laboratory investigation, radiological imaging and clinical procedures), Management questions; includes treatment and clinical management non-therapeutic, therapeutic, patient safety, complication. Health maintenance questions; includes health promotion, disease prevention, risk factors assessment, and prognosis, see examples below.

• The examination shall include basic concept and clinical questions relevant to specialty, see blueprint below.

Examination Conduct and Duration:

Exam period shall be two hours for a 100 questions paper and two and 1/2 hour for 120 questions paper. The exam will be delivered as a computer based test when available, otherwise paper and pencil.
Passing Score:

a. The passing score is 70%. However, if the percentage of candidates passing the examination is less than 70%, the passing score can be lowered by one mark at a time aiming at achieving 70% passing rate or 65% passing score whichever comes first. Under no circumstances can the passing score be reduced below 65%.

b. Alternatively, to set the passing score a standard setting method that is supported by published scientific evidence can be used, for which the Angoff method is recommended. The process to arrive to the passing score requires prior review and approval. If standard setting is used the above passing score regulation does not apply. See appendix 7 for more details in the exam rules and regulations document on the SCFHS website.

c. To set a passing score using a standard setting method (b), the specialty examination committee must obtain approval of the process and passing score from the SCFHS Assistant General Secretary for Postgraduate Studies one month prior to exam administration.

Declaration of Result:

All score reports shall go through a post-hoc item analysis before being issued and approved by the SCFHS and SEC within two weeks of the examination.

Exemption:

SCFHS at present has no reciprocal arrangement with respect to this examination or qualification by any other college or board, in any specialty.

Example Questions

EXAMPLES OF K2 QUESTIONS

Question 1

Intra-oral photograph of an Implant following flap elevation and removal of granulation tissue.

A 43-year-old man presented to the clinic with persistent bleeding and food impaction at implant site placed 3 years ago.

Clinical examination:
PpD – 10mm at all sites
BoP – 100%
Mobility – grade 2

Which of the following is the most likely diagnosis?

A. Mucositis
B. Oseomyalitis
C. Periodontitis
D. Peri-implantitis

Question 2

A 25-year-old woman requiring a replacement of missing teeth # 11 and 21. There is no medical contraindication for implant surgery. Papilla was absence and there was extreme loss of buccal tissues.

Which of the following options is the best approach to restore function and esthetic?

A. Soft tissue augmentation and implant in two stages.
B. Hard tissue augmentation and implant in two stages.
C. Soft tissue then hard tissue augmentation and implant in three stages.
D. Soft tissue, then hard tissue augmentation, implant, and then papillae like tissue surgery in four stages.
EXAMPLES OF K1 QUESTIONS

Question 3
Which of the following if absent is an indication of implant stability?

A. Clinical mobility  
B. Occlusal interferences  
C. Radiographic bone loss  
D. Soft tissue inflammation

Question 4
Which of the following is an indication of the cribriform plate?

A. Lamina dura  
B. Sharpey’s fiber  
C. Supporting bone  
D. Outer cortical plate
